speculative postulate (P1, P3, P4)
established physics (P2)
selection theory
falsification framework
P1 Optimization pressure
computation is the universal currency
P2 Thermo. gradient
accretion 5.7–30% vs fusion 0.7%
sink 10^3–10^7 realized
storage 10^{86} bits
P3 Quiet migration
electromagnetic quietness is a selection effect
P4 Observable residue
spin, depletion, neutrino bursts
Selection criteria
ω Cen: $4\times10^6\,M_\odot$
12 Gyr, 5.49 kpc
ρ_c $4.0\times10^3\,M_\odot/\mathrm{pc}^3$
Falsification framework
T1–T6 with thresholds and timelines
ω Cen application
Section 5: the optimal target (Table 4)
decision tree
Figure 7: LISA branch, T3, T5 retire; T4 demotes
